Part I. Annotated Bibliography Project

For this assignment, you will create an annotated bibliography on the subject of climate change as it relates to the film Chasing Ice. You can choose to focus on researching the claims of the film itself or a specific topic related to climate change, i.e. how climate change affects real estate, water sports, coral reefs, endangered species, human disease, food production, ...etc...

You will need to write a total of 4-5 pages (2-3 sources per page), listing a minimum of 10 sources. 5 sources need to be from peer reviewed journals and 5 should be online sources (blogs, newspaper articles, magazines, videos, radio shows, podcasts, etc...) which can be media sources such as film, radio, t.v., etc.

Please use MLA format for this assignment.

After you list/cite your source, make sure to include a half page annotation and discussion of relevance to the research paper topic. Feel free to follow the questions that the Purdue link (below) suggests for writing the annotation.

- Chasing Ice website:
  http://www.chasingice.com

Due:
- Rough draft – Wednesday, October 12
- Final Draft – Monday, October 17

Actual topics students chose:
- Energy usage
- Endangered species
- Political Ramifications – U.S.
- Biodiversity
- Effect on U.S. economy
- Ocean temperature
- U.S. government policy
- Endangered species
- Human mortality
- Human Health – Pharmaceutical production
- Wildlife – whales and animals
- Human evolution
- Crime
- Ocean Temperature
Part II. Climate Change Solution

For this paper, you will propose a solution to an effect of climate change using your annotated bibliography project as a jumping off point. Choose an effect of climate change from your annotated bibliography paper and imagine a solution that would solve the given problem. For example, it could be a machine, a policy, a law, an activist group, a social media website, an organization, etc...

Include the following in your paper:
A description of the problem resulting from climate change.
A discussion of the ethics in considering the problem and it's solution.
A description of the cause of the problem.
A summary of your proposed solution.
A detailed description of how your solution works that uses academic knowledge and research.
A picture of your solution that is of one of the following: your invention (what it looks like), what it does, people implementing the solution, a before/after image.

The paper will be 5 pages, (4 will be words and 1 will be an image) typed, double spaced. Due December 7.

A few examples of actual proposed solutions:
